# Prototype Data Persistence

For the data persistence in the prototype we will store the data in the HANA Database and use XSODATA-Services to expose them.

Overview

NOTE: If you want to insert new data please use the Insert Template for each relation in the HANA Workbench Editor (d064868 package) to generate an auto-increment id.

Services

Contacts
https://bca3acb28be61.hana.ondemand.com/d064868/contact/contact.xsodata

Location
https://bca3acb28be61.hana.ondemand.com/d064868/location/location.xsodata

Relation
https://bca3acb28be61.hana.ondemand.com/d064868/relation/relation.xsodata

Authentication
For reading the data, no authentication is needed. For write (CREATE, UPDATE, DELETE) use Basic Authentication with your HANA DB User.
